Business Management graduate who runs things rather than supports them. Across four businesses I have built the software, run the store, owned the P&L and fixed the broken process, usually without being asked. Scaled a Malaysian brand 10x (RM 50K to RM 500K) in six months, built an app that recovered about $15K an importer had lost track of, and cut a US client's onboarding from one hour to five minutes. Comfortable owning outcomes end to end, including the bad ones.
